natenetworks.com

I am a motivated IT professional with certifications. I am experienced in system administration, technical support, and infrastructure management through both professional roles and self directed learning. I am actively managing a public facing Virtual Private Server that hosts a personal documentation system (BookStack) and website. The website and server are regularly updated with technical projects and automation workflows. I am seeking to transition into a system administration or security focused role where I can continue building and securing IT infrastructure.
